Amendments to the Claims are reflected in the listing of claims which begins on page 3 of this paper.

Remarks/Arguments begin on page 12 of this paper.

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1 Claims 1-11 (Canceled).

1 Claim 12 (Currently amended): A liquid crystal 2 display device comprising: 3 a liquid crystal panel comprising liquid crystal cells, a first plate disposed on a displaying side of the 4 5 cells, and a second plate disposed on a reverse side of the 6 cells; 7 a liquid crystal driver electrically connected with the liquid crystal panel through a circuit pattern; 8 9 and a light shielding material disposed adjacent said 10 11 liquid crystal driver so as to prevent an outer light from being incident to said liquid crystal driver, wherein 12 one end of said liquid crystal panel is located 13 14 on the a film carrier, and said end is being covered with 15 a light shielding film extending from a displaying side of said liquid crystal panel to a displaying side of said film 16 17 carrier.

- 1 Claim 13 (Withdrawn): The liquid crystal display
 2 device according to the claim 12,
- wherein said first plate has a reverse side 3 facing the liquid crystal cells and an opposite displaying 4 side said liquid crystal driver is mounted on the reverse 5 side of the first plate, ansaid light shielding material 6 comprises a light shielding film affixed to the displaying 7 side of said first plate so as to cover an area which is 8 9 opposite to a mounting position of said liquid crystal driver. 10
 - 1 Claim 14 (Withdrawn) The liquid crystal display
 2 device according to the claim 12,
 - wherein said second plate has a displaying side facing the liquid crystal cells and an opposite reverse side and said liquid crystal driver is mounted on the display side of the second plate, and
 - said light shielding material comprised a light shielding film affixed to the reverse side of the second plate.

- 1 Claim 15 (Withdrawn): The liquid crystal display
- 2 device according to the claim 12,
- 3 wherein said circuit pattern is formed on a film
- 4 carrier;
- 5 said liquid crystal driver is mounted on the film
- 6 carrier and disposed under the second plated; and
- 7 said light shielding material comprises a light
- 8 shielding film affixed on <u>a</u> surface of said liquid crystal
- 9 driver facing the second plate.
- 1 Claim 16 (Withdrawn): The liquid crystal display
- 2 device according to the claim 15,
- 3 wherein said liquid crystal driver is mounted on
- 4 a surface of said film carrier facing the second plate;
- 5 and a surface of said liquid crystal driver
- 6 opposite the second plate is covered with light shielding
- 7 resin.
- 1 Claim 17 (Withdrawn): The liquid crystal display
- 2 device according to the claim 15,
- 3 wherein said liquid crystal driver is mounted on
- a surface of said film carrier opposite the second plate;

- 5 and a surface of said liquid crystal driver
- 6 facing the second plate is covered with light shielding
- 7 resin.
- 1 Claim 18 (Previously presented): The liquid crystal
- 2 display device according to the claim 12,
- 3 wherein the device is further mounted in a
- 4 portable telephone terminal.
- 1 Claim 19 (Previously presented): The liquid crystal
- 2 display device according to the claim 12, further
- 3 comprising a diffusion sheet located adjacent said liquid
- 4 crystal display panel, wherein said diffusion sheet is
- 5 composed of a light diffusing area and a light absorbing
- 6 area located on the outer periphery thereof, the light
- 7 diffusing area serving to diffuse illumination light from
- 8 a light source to the liquid crystal display panel, and the
- 9 light absorbing area serving to absorb the extraneous light
- 10 incident on said liquid crystal driver.
 - 1 Claim 20 (Currently amended): The liquid crystal
 - 2 display device according to the claim 12 19, wherein the
- 3 first plate has a first transparent electrode, the second
- 4 plate has a second transparent electrode, and the liquid

- 5 crystal cells are carried between the first and second
- 6 transparent electrodes and;
- 7 the device further comprises a light shielding
- 8 resin covering an exposed area of the first transparent
- 9 electrode from the liquid crystal cells so that the light
- 10 which reflects from said a diffusion sheet to reach the
- 11 liquid crystal is shielded.
 - 1 Claim 21 (Previously presented): The liquid crystal
 - 2 display device according to the claim 20, wherein said
 - 3 light shielding resin and said light absorbing area of said
 - 4 diffusion sheet are colored in black.
 - 5 Claim 22. (Previously presented): The liquid crystal
 - 6 display device according to the claim 20, wherein said
 - 7 light shielding resin is colored black.
 - 1 Claim 23 (New): A liquid crystal display device
 - 2 comprising:
 - 3 a liquid crystal panel comprising liquid crystal
 - 4 cells, a first plate disposed on a displaying side of the
 - 5 cells, and a second plate disposed on a reverse side of the
 - 6 cells;
 - 7 a liquid crystal driver electrically connected

- 8 , with the liquid crystal panel through a circuit pattern;
- 9 and
- 10 a light shielding material disposed adjacent said
- 11 liquid crystal driver so as to prevent an outer light from
- being incident to said liquid crystal driver;
- a diffusion sheet located adjacent said liquid
- 14 crystal display panel, wherein
- 15 said diffusion sheet is composed of a light
- 16 diffusing area and a light absorbing area located on the
- outer periphery thereof, the light diffusing area serving
- 18 to diffuse illumination light from a light source to the
- 19 liquid crystal display panel, and the light absorbing area
- 20 serving to absorb the extraneous light incident on said
- 21 liquid crystal driver, wherein
- one end of said liquid crystal panel is located
- on a film carrier, said end being covered with a light
- 24 shielding film extending from said liquid crystal panel to
- 25 said film carrier.
 - 1 Claim 24 (New): A liquid crystal display device
 - 2 comprising:
 - a liquid crystal panel comprising liquid crystal
 - 4 cells, a first plate disposed on a displaying side of the
- 5 cells, and a second plate disposed on a reverse side of the
- 6 cells;

14

a liquid crystal driver electrically connected 7 with the liquid crystal panel through a circuit pattern; 8 and 9 a light shielding material disposed adjacent said 10 liquid crystal driver so as to prevent an outer light from 11 being incident to said liquid crystal driver, wherein 12 one end of said liquid crystal panel is located 13 on the film carrier, said end being covered with a light 14 shielding film extending from a reverse side of said liquid 15 crystal panel to a reverse side of said film carrier. 16 A liquid crystal display device 1 Claim 25 (New): comprising: 2 a liquid crystal panel comprising liquid crystal 3 cells, a first plate disposed on a displaying side of the 4 cells, and a second plate disposed on a reverse side of the 5 cells; 6 a liquid crystal driver electrically connected 7 with the liquid crystal panel through a circuit pattern; 8 9 and a light shielding material disposed adjacent said 10 liquid crystal driver so as to prevent an outer light from 11 being incident to said liquid crystal driver, wherein 12 one end of said liquid crystal panel is located 13

on the film carrier, said end being covered with a light

20

shielding film extending from said liquid crystal panel to 15 said film carrier, wherein 16 another end of said liquid crystal panel is 17 projected away from the film carrier. 18 A liquid crystal display device 1 Claim 26 (New): 2 comprising: a liquid crystal panel comprising liquid crystal 3 cells, a first plate disposed on a displaying side of the cells and having a first transparent electrode, and a 5 second plate disposed on a reverse side of the cells and 6 having a second transparent electrode, the liquid crystal 7 cells carried between the first and beina second 8 9 transparent electrodes; a liquid crystal driver electrically connected 10 with the liquid crystal panel through a circuit pattern; 11 a light shielding material disposed adjacent said 12 liquid crystal driver so as to prevent an outer light from 13 being incident to said liquid crystal driver; and 14 a light shielding resin covering an exposed area 15 of the first transparent electrode from the liquid crystal 16 cells so that the light which reflects from a diffusion 17 sheet to reach the liquid crystal is shielded; 18 wherein one end of said liquid crystal panel is 19

located on the film carrier, said end being covered with a

- 21 light shielding film extending from a reverse side of said
- 22 liquid crystal panel to a reverse side of said film
- 23 carrier.
 - 1 Claim 27 (New): The liquid crystal display device
 - 2 according to the claim 26, wherein said light shielding
 - 3 resin and said light absorbing area of said diffusion sheet
 - 4 are colored in black.
 - 1 Claim 28 (New): The liquid crystal display device
 - 2 according to the claim 26, wherein said light shielding
 - 3 resin is colored black.
